## 1 Introduction

### 1.1 Purpose

This document outlines the database schema for **ThriftFinder**, a local thrifting marketplace app. The design ensures efficient data modeling for:

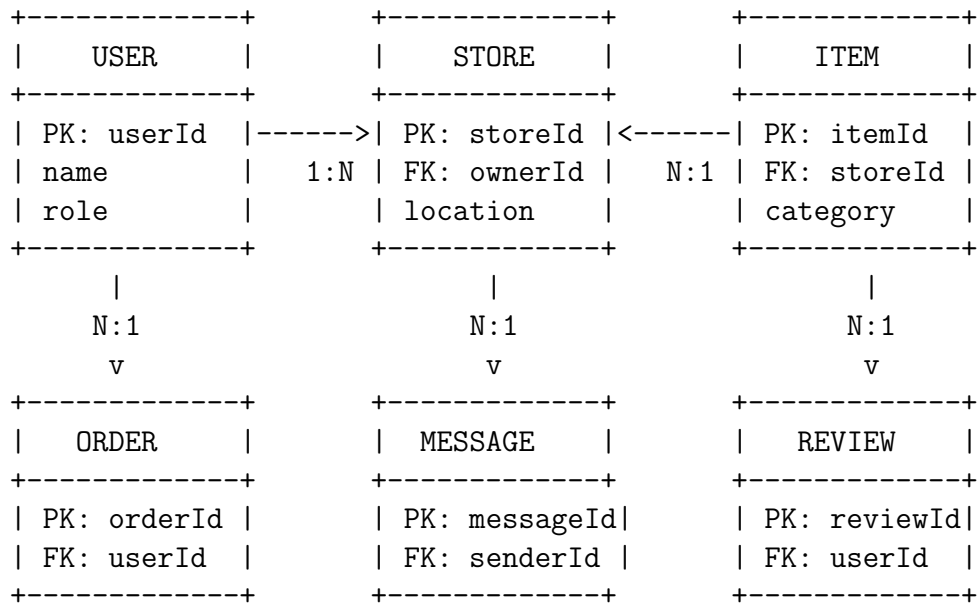

- **Shoppers:** Browse nearby thrift stores, filter items, and place orders
- **Shop Owners:** Manage inventory, communicate with buyers, and track sales

### 1.2 Database Choice

- **Firestore (NoSQL):** Best for real-time updates (e.g., chat, inventory changes)
- **MongoDB:** Better for complex queries (e.g., analytics, geospatial searches)

## 2 Entity-Relationship Diagram (ERD)

### 2.1 Text-Based ERD

### 2.2 Key Relationships

Relationship	Type	Description
User → Store	1:N	One user (owner) can own many stores
Store → Item	1:N	One store can list many items
User → Order	1:N	One user can place many orders
Store → Order	1:N	One store can have many orders
User Message	M:N	Users/stores can send/receive messages
User/Store → Review	1:N	Users can review stores/items

## 3 Detailed Entity Breakdown

### 3.1 Users

**Purpose:** Stores shopper and shop owner accounts.

```
{
  "userId": "string (UUID)",
  "name": "string",
  "email": "string (unique)",
  "role": "'shopper' | 'shop_owner'",
  "location": { "lat": number, "lng": number },
  "favoriteStores": ["storeId1", "storeId2"]
}
```

## 3.2 Stores

**Purpose:** Thrift shop profiles.

```
{
  "storeId": "string (UUID)",
  "ownerId": "string (ref: users.userId)",
  "location": { "lat": number, "lng": number },
  "openingHours": [
    { "day": "Monday", "open": "9:00 AM", "close": "6:00 PM" }
  ]
}
```

## 4 Collections & Fields

Collection	Key Fields	Indexes
users	userId, role, location	location (geospatial)
stores	storeId, ownerId, location	ownerId, location
items	itemId, storeId, category	storeId, category

## 5 Sample Queries

### 5.1 Find Nearby Stores (5km Radius)

```
// MongoDB
db.stores.find({
  location: {
    $near: {
      $geometry: { type: "Point", coordinates: [userLng, userLat] },
      $maxDistance: 5000
    }
  }
});
```

## 6 Appendix

### 6.1 Tools for Visual ERD

- Lucidchart (<https://lucidchart.com>)
- draw.io (<https://draw.io>)
- QuickDBD (<https://quickdatabasediagrams.com>)
